Kris Nowicki

Junior Web Developer

I'm an entry level web developer with passion and love towards designing and programming. Since early childhood I was interested in IT related topics, computer and network servicing. During the studies, I've already started my awesome adventure from simple HTML websites to web apps, using Microsoft stack, and I would like to continue it with commercialy experienced devs nearby. In the near future I'm planning to get to know OOP JavaScript, NodeJS and Angular or React, so I can be more useful in projects. I'm eager to learn new technologies as well as polish the existing ones - all with amazing effort on board. Joining your team would be an immensely satisfying experience. I would love to take up this challenge.

Educational Background

2014- 2018
